

MUAZ BUTT

Software Engineer | Python & Backend Development
muaazbutt585@gmail.com | +92 322 4150113 | Lahore, Pakistan
Portfolio: muaazbutt.netlify.app | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Computer Science graduate with backend internship experience building Python REST APIs, authentication workflows, and real-time features. Strong foundation in algorithms, data structures, and object-oriented programming, with 280+ coding problems solved. Experienced in Git-based teamwork, debugging, and testing; currently building and evaluating Python-based LLM applications. Interested in developer tooling, SDKs, and reliable backend systems.

PROFESSIONAL EXPERIENCE

Technical Content Engineer | Educative

Aug 2026 - Present | Lahore

- Build and evaluate Python-based LLM applications, including a coding-editorial generator and live mock-interview agent, using structured prompts and function calling.
- Test generated outputs for correctness, diagnose issues, and refine implementations to improve reliability, clarity, and maintainability.
- Work hands-on with APIs, AWS services, Docker, Kubernetes, Helm, and MongoDB to develop backend and cloud fundamentals.

Backend Developer Intern | Deutics Global

Aug 2024 - Dec 2024 | Lahore

- Developed and maintained Django REST Framework APIs for user management, JWT authentication, and password-reset workflows.
- Fixed backend issues and contributed production features using modular, reusable code, input validation, and consistent API behavior.
- Implemented WebSocket-based real-time communication and integrated OpenCV functionality for product requirements.
- Collaborated with engineers through Git branching, code reviews, debugging, testing, and deployment cycles.

SELECTED PROJECTS

AikApply | Python, Django, LangChain, Selenium | Sep 2025 - May 2026 | [Live Demo](#) | [Source Code](#)

- Built a university admission platform for Pakistani students: one application form, Gemini-powered recommendations based on preferred fields, an AI career chatbot, and a deadline tracker.
- Automated applications on unfamiliar portals by mapping student data to form fields with LangChain and Gemini, then logging in and submitting with Selenium; deployed with Docker and PostgreSQL.

TaskFlow API | Java, Spring Boot, PostgreSQL | Aug 2026 | [Source Code](#)

- Built a task-management REST API with Spring Data JPA, JWT authentication, BCrypt password hashing, request validation, and centralized exception handling.
- Added priorities, overdue tracking, server-side search, filtering and sorting with JPA Specifications, and a workload summary endpoint, covered by integration tests.

Chess Game | C++, JavaScript | May 2023; rebuilt Oct 2026 | [Source Code](#)

- Implemented complete chess rules in C++ through a polymorphic Piece class hierarchy: castling, en passant, promotion, check, checkmate, stalemate, and draw rules.
- Added a browser interface served by a C++ web server and verified move generation against published perft counts with 34 automated tests.

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript, SQL, Rust

Backend: Django, Django REST Framework, Spring Boot, ASP.NET, REST APIs, WebSockets

Databases: PostgreSQL, MySQL, MongoDB, Redis

Tools & Cloud: Git, GitHub, Postman, Docker, Docker Hub, Kubernetes, Helm, AWS fundamentals

Engineering: Data structures and algorithms, OOP, database design, debugging, testing, code reviews, HTTP, API validation, authentication and authorization

AI Development: LLM applications, function calling, structured prompting, Claude Code, context management, iterative code refinement

EDUCATION & ACHIEVEMENTS

BS Computer Science | University of Engineering and Technology

Dec 2022 - Jun 2026 | CGPA: 3.49

Solved 280+ problems on LeetCode and Codeforces; Top 5 in a UET programming competition.
